

vitero inspire

Update Information (Status: 10/25/2021)

Update 10/25/2021: V3.1.2 → V3.2.0

IMPROVEMENTS AND FEATURES:

vitero inspire

- **[Subrooms]** including the main room can now be freely named. In order to reduce the editing effort, there are suggestions for City, mountain and river names integrated.
- Now the trainer (vitero role group leader) can trigger a gong in all **[subrooms]** at the same time. In addition to the already existing possibility of text-based communication in all [subrooms] at the same time, it can also be audibly signaled, for example the end of small group work.
- When leaving, trainers (vitero role group leader) are asked whether files that they have made available via the **[file exchange]** should be deleted.
- With the **[Screen Sharing]**, the person showing can transfer remote control rights to a participant via the vitero application file. This function has been expanded so that when the remote participant controls the mouse (via the vitero application file and the browser), the mouse wheel and the right and middle mouse button can now also be controlled remotely.
- **[Speech bubbles]** can now be deleted by the moderator not only all at the same time, but also individually. To do this, the speech bubbles are simply dragged away using drag & drop.
- The maximum number of available **[microphone tokens]** can now be freely set between 1 and 12. If you select the value 1 and click on a participant avatar to give him the right to speak, the microphone token is automatically moved from the previous speaker (if the token is still there) to the current speaker.
- Filtering option in the **[group selection]**: Participants can filter by group / event name and group ID. Administrators and organizers also have the option of filtering by tenant name and user.
- Trainers (vitero role group leader) can now remove individual participants from a session. You can determine whether the participant's access to the group session should be permanently denied.

- In addition to files with the formats .png, .jpg / jpeg & .pdf, files with the mp4 format can also be temporarily uploaded via the **[Content]** menu.
- Various other improvements.

Vitero Management System

- In the group view in the Vitero Management System, a so-called **[member link]** is now also displayed, via which authenticated users assigned to the group can directly access the group's room (if booked).

BUG FIXES & DETAIL IMPROVEMENT:

vitero inspire

- A bug has been fixed that caused the attendances not to be correctly exported via the [Chat].
- An error in the [Highlighter] has been corrected so that the distances in the [Work equipment] menu are displayed correctly again as soon as the [Highlighter] is activated.
- Fixed an issue with [Overlays] that caused overlays not to be displayed during recording by the [Session Recorder].
- A bug in the [Session Recorder] has been fixed, which meant that the sidebars could no longer be opened by the icon of the [Audio player] if the area [Table] or [Room] was set for the recording.
- An error when playing video files has been fixed if the files were larger than 1920 pixels x 1080 pixels.
- Various bug fixes and performance improvements.

Update 09/09/2021: V3.1.1 → V3.1.2

IMPROVEMENTS:

vitero inspire / vitero inspire+

- Bug fixes and performance improvements.

Update 08/31/2021: V3.1.0 → V3.1.1 & vitero Application file V3.0.0 → V3.1.0 (Coreversion)

PERFORMANCE:

- The CPU utilization by the application file has been significantly reduced and is now comparable to the browser version of **vitero inspire**. These and other performance optimizations enable a performance increase of up to 50%.
- The quality of the audio transmission is now even less susceptible to interference than in the browser with extremely high or complete CPU utilization.

Recommendation: If the interference reduction in the [Performance Options] is not sufficient to improve the audio quality in the browser, switch - if possible - to the Windows application file.

SCREEN SHARING – IMPROVEMENTS AND FEATURES:

- The entire screen can now also be transmitted via [Screen Sharing]. In contrast to split application windows, remote control of an entire desktop is currently not yet possible.
- The transfer of a window or screen is now started directly by clicking on the corresponding preview image in the [Screen Sharing] menu. This enables a more comfortable and simple operation as well as the quick change of the shared content.

- It can now be individually set whether the split window is automatically placed over the display area of the vitero room. The setting for this is made using a switch in the [Screen Sharing] menu. Activating this feature makes it easier to use, especially for pointers with only one monitor.
- The collaboration tools [Maps] and [Stickers] as well as the pointer for [Referencing] can now also be stored on content transmitted via [Screen Sharing] when using the application file. However, the function "Automatically place selected window on display area" must not be activated.
- In these cases, [Screen Sharing] is automatically terminated so that important information messages (such as starting a survey) are also visible when the split window is on the display area. This improves the usability for pointers with only one monitor.

IMPROVEMENTS:

vitero inspire

- Bug fixes and performance improvements.

Update 08/09/2021: V3.0.6 → V3.1.0

IMPROVEMENTS AND FEATURES:

vitero inspire

- Through optimizations and stabilizations, such as the improvement of the management of audio devices, the improvement of errors that can occur when establishing or losing a WebRTC connection, a higher quality of audio, screen sharing and live images is achieved via a webcam.
- When using vitero inspire for the first time, audio devices recommended by us - if connected - are selected with preference, see also [vitero hardware recommendations](#).
- The **[Refresh]** function can now also be used in the Mozilla Firefox browser.
- In addition to the previous storage of personal settings, such as audio devices or volume via cookies, environment settings can now also be saved. The following room-related settings are also recorded after the session has ended and are set automatically when you re-enter:
 - **[Referencing]**: shape, color & alignment.
 - **[Webcam]**: Activation / deactivation of the option [Show names permanently] & the resolution.
 - **[Room]**: Seating, design & settings for the table rail.
 - **[Adjoining rooms]**: Number (depending on the room size) & activation / deactivation of the room message.
 - **[Attendees]**: Name badges, activation / deactivation of Push-to-Talk, automatic token allocation & settings for moderation rights.
 - **[Forum]**¹: Status (Open or Closed) & Topics (Name, Description and Settings. No content).
 - **[Messages]**¹: Status (allow or not allow) & settings (no content).

¹ **Vitero inspire +** must be licensed for these functions.

- **[Session Recorder]²**: Reception area (table, room and everything).
- The **[Screen Sharing]** menu has been simplified. When dialing in via a browser, (co-) moderators can now directly access the sharing dialog of the respective browser by clicking on the [Screen Sharing] icon in the [moderation case] or on the table bar.
- In the [Settings] in the **[Webcam]** menu, you can now choose whether you would like to generally allow your live transmission for this session or whether you would prefer to be asked explicitly via a dialog every time the moderator assigns you the webcam token.
- The diagram of the **[polls]** has been adjusted. The diagram now clearly shows you how many people took part in your survey and how many people who were present abstained (example: participation: 6 (of which abstentions: 1) out of 8 people present).

BUG FIXES & DETAIL IMPROVEMENT:

vitero inspire

- Using the buttons on some headsets no longer opens the [text chat] in the personal bar.
- Your headset will be recognized in **vitero inspire** in the Mozilla Firefox browser, even if you unplug it and plug it in again while all "Allow" messages for the microphone have not yet been confirmed.
- Bug fixes and performance improvements.

²Vitero session recorder must be licensed for these functions.

Update 06/21/2021: V3.0.5 → V3.0.6

IMPROVEMENTS:

vitero inspire

- When closing the [adjoining rooms] the slides are now being closed correctly. If you open the [adjoining rooms] again, the Display area no longer shows a presentation.
- Under [iPadOS] in the [Polls] menu within the [+ New Poll] area, the menu is now displayed correctly again.
- Bug fixes and performance improvements.

Update 05/21/2021: V3.0.4 → V3.0.5

IMPROVEMENTS:

vitero inspire

- Bug fixes and performance improvements.

Update 05/20/2021: V3.0.3 → V3.0.4

IMPROVEMENTS:

vitero inspire

- Bug fixes and performance improvements.

Update 05/19/2021: V3.0.0 → V3.0.3

IMPROVEMENTS AND FEATURES:

vitero inspire

- The sharing dialog for the live broadcast from **[Screen Sharing]** has been adjusted and no longer appears that often.
- Using the **[File exchange]** function, those present cannot make more than 20 files available at once. A warning then appears.

BUG FIXES & DETAIL IMPROVEMENT:

vitero inspire

- On the login page of **vitero inspire** in the area [Login], the [Forgot password] function is available again below the user data.
- After using the [Refresh], participants no longer hear themselves if they are dialed in via the Firefox browser or via the vitero inspire application file.
- Participants who receive remote control rights for the **vitero inspire** application file while [Screen Sharing] is active can enter letters and characters using the keyboard.
- Presentations that are placed via the [Content] menu can be paged forwards and backwards using the arrow keys on the keyboard.
- Files that have been placed via the [Content] menu can only be paged back and forth by the (co-) moderator, not by a participant, using the arrow keys on the keyboard.
- If you use the arrow keys on the keyboard in the [Text Chat], in the [Messages] or in the [Forum], the presentation on the display area is not scrolled forwards or backwards.
- The overlay that appears when you drag and drop a file on the display area can be closed again in the **vitero inspire** application file if the file is not placed on the display area.
- Temporarily uploaded files with mutated vowels in their file names can be displayed in the [Content] menu and placed on the [Display area].

- It is now possible to switch back and forth correctly between the stack and tile view of the [window preview] if the webcam was displayed before.
- The [Highlighter] for the [Window Preview] has been added.
- The notification symbol on the [Chat] now disappears when you open the [Chat] and can read the text bubbles.
- The logo uploaded via the Vitero Management System is now displayed in the virtual room.
- Some adjustments for the different [languages] have been made.
- Incorrect [tooltips] have been corrected.

Update 05/02/2021: V2.2.12 → V3.0.0

IMPROVEMENTS AND FEATURES:

vitero inspire

- Split several windows at the same time on the table using the **[Window preview]** function. You can “stack” them or arrange them next to each other. A preview makes it possible, among other things, to determine the order and to select windows directly.
- The **[table bar]** has been revised and now offers additional functions for direct access in three areas: Control a single window on the left, control the arrangement of all windows on the right and find the tokens and other functions in the middle.
- Use the **[Webcam]** function to display up to 12 live images in parallel. Particularly practical: arrange the webcam images flexibly - on top of, above or next to the presentation or without any presentation at all. The size of the webcam display can be set.
- If participants have received the webcam object without a microphone, you as the (co-) moderator can subsequently drag the **[microphone token]** onto the avatar or onto the webcam image of the participant in order to grant the right to speak.
- The new **[webcam token]** is available via the [table bar] to activate the webcam without a microphone.
- Copy individual contributions as a trainer (vitero role: group leader) of the **[text chat]** via the right mouse button to the clipboard (if restrictions or extensions of these rights were made for an existing client for the previous generation **essentials**, these will be automatically applied to the **inspire** generation Changes are possible at any time. Please contact your customer advisor).
- The following **[languages]** are available in **vitero inspire**³: German, English, French, Italian, Chinese, Japanese, Korean, Croatian, Dutch, Polish, Portuguese, Russian, Swedish, Spanish, Czech and Turkish.

³Texts that were added due to Release 3.0 are temporarily only available in German and English. They will be updated promptly.

- As a group leader, you can swap the **[seat]** with another participant directly using drag and drop. This is particularly helpful when the rooms are completely full.
- As a client-specific configuration, participants on the **[moderation chair]** also automatically receive group leader rights. If you are interested, please contact your customer advisor.
- Group leaders can enter the virtual room even if the **[waiting room]** is active (the room is currently booked but has been blocked by a group leader). This corresponds to the concept of a stage entrance.
- Up to 12 **[microphone tokens]** can be distributed to participants in the virtual room.
- In the [Present] menu within the [Settings] you can now activate the option **[Automatic token allocation when entering]**. As a result, 12 participants receive a microphone, webcam or microphone / webcam token when they enter the virtual room.
- An additional notification symbol, also known as a badge, on the **[Adjust volume]** icon at the bottom left informs you when you have muted yourself.
- In the **[Avatar]** menu, in addition to creating an image via the webcam, you can now also upload an image directly. Until now, this was only possible via the Vitero Management System.
- The **[Color blind mode]** can be switched on in the [Accessibility] menu. When activated, the colors are automatically adjusted to increase the contrast.
- Via the **[Content]** menu, formerly [Display], you can now display files such as slides by double-clicking them.
- Temporary slides can now be deleted in the **[Content]** menu.
- If the characters :), : D, ;), : O, :(, <3 are entered in the [Textchat], the associated **[Emojis]** are triggered.
- Under **[iOS]** - i.e., with iPhones - the functions [Screen Sharing] viewing, [Webcam] and the [Video player] can now be used, since the integrated Safari browser supports the corresponding video codec in accordance with WebRTC and the display of videos. In-picture now supported.
- The **[Tooltips]** have been expanded throughout the virtual room.

- As a **vitero** group leader, you can use the **[File exchange]** function to exchange files directly in the room. Provide your participants with materials or allow the exchange of documents in the group. Practical for exams: In the [Hidden] mode, participants can only send their results to the **vitero** group leaders. In order to use the [file exchange] you, as an administrator, have to enable the function for the client in the Vitero Management System in the menu [Room Settings].
- In addition to the standard blue design, four other options are available to you for redesigning the room via the **[Room]** menu: silver, dark, meadow and parquet.
- After a closed card query, all [cards] can be removed using a button.

Add-on module vitero custom design

- With vitero custom design, the background image, the color gradient, the light effect and the font color can be customized. In addition, your own logo can be placed in the middle of the table as a watermark. You can make the adjustments by yourself using the Custom Design Editor. You can find the relevant user manual for the vitero custom design module [here](#).

Add-on module vitero monitoring+

- Also include the degree of interaction when awarding **[credit points]**. Card, point and multiple-choice queries are taken into account. Define yourself the degree of interaction from which the participant will receive further training points. You can also see the [Interaction Log] in the virtual room to follow the interactions live. If you are interested, please contact your customer advisor (if the tracking of the degree of interaction has already been set for an existing client for the previous generation **essentials**, this will be automatically adopted for **inspire**).

Add-on module vitero audience+ 100/200

- You can now also use [Screen Sharing] and [Webcams] at your major event when spectators are present. In addition, the limit of 10 avatar participants when using [**vitero audience**] and [**vitero audience +**] is lifted. Depending on the license, up to 80 participants can be represented as avatars.

BUG FIXES & DETAIL IMPROVEMENT:

vitero inspire

- Long group or event names can be viewed by mouse-over in the [Room selection].
- If you take part in a [survey] as a (co-) moderator, you will automatically return to the [Surveys] menu in the [moderation case] after submitting your answer.
- If you select the option [Any] or [Up to] for the answer options for a [Survey], only the bar chart is available as a display option.
- Folders that are created on your computer via the **vitero inspire** application file are marked with the date and time.
- The drag & drop overlays have been adjusted.
- Representations have been adjusted under [iOS].
